EDUCATION

- Vellore Institute of Technology**
Bachelor of Technology (Computer science engineering); CGPA - 8.5
- Class XII**; Percentage - 97%
- Class X**; Percentage - 99%

Bhopal, India
Sept 2023 - May 2027
Malappuram, Kerala
March 2021 -2023

SKILLS SUMMARY

- Languages:** Python, Java, C++, SQL
- Frameworks:** Pandas, NumPy, TensorFlow, Matplotlib. Scikit-learn
- Tools:** Git, GitHub, HTML, CSS
- Platforms:** Linux, Windows
- Version Control:** Git, GitHub
- Operating Systems:** Linux
- Concepts:** Object-Oriented Programming (OOP), Data Structures and Algorithms, AI/ML, System Design, Distributed Systems, SDLC, Agile
- Soft Skills:** Problem Solving (DSA), project management, good communication

WORK EXPERIENCE

IoT-AI Intern | Vandyam

April - May 2025

- Contributed to the design and implementation of an AI-powered farm automation system by integrating AI with a LoRaWAN-based sensor network.
- Conducted requirement analysis for key use cases including pest prediction, crop recommendation, water/nutrient analysis, and intrusion detection.
- Assisted in developing detailed hardware and software specifications for an on-site AI server, enabling offline scalability without global IP dependency.
- Simulated real-time sensor data using Python to create a Proof of Concept (PoC), validating MQTT-based communication, data flow logic, and AI model integration.
- Defined dataset requirements and implemented preprocessing strategies, improving model training efficiency and boosting prediction accuracy by 27%.
- Achieved over 91% accuracy in early-stage ML models, significantly enhancing decision-making in automated farming environments.
- Collaborated in an Agile environment to design and test scalable AI solutions for edge deployment, applying OOP to build modular backend components and improve system efficiency and latency.

PROJECTS

1. ArtConnect Platform – Palette

(Ongoing)

React.js, Flask, MySQL, Razorpay, Cloudinary, Zoho

- Building a full-stack web platform to empower unrecognized artists in India through monetization and community engagement.
- Developed user profiles, artwork uploads, real-time messaging, and payment integration using Razorpay.
- Engineered secure Flask backend with MySQL, REST APIs, and deployed on Zoho with Cloudinary media management.

2. AI-Powered Document Q&A System - [Link](#)

(Oct 2024 – Dec 2024)

- Built a scalable document-aware chatbot using Llama 3 via Groq API and OpenAI Embeddings, achieving 92% answer accuracy.
- Designed and implemented backend data pipeline for PDF parsing, vector search (FAISS), and retrieval using REST APIs.
- Applied modular architecture and software design principles for maintainability and scalability.

3. Crop Recommendation Model - [Link](#)

(April - May 2024)

Flask, Scikit-learn, HTML, CSS

- Developed an AI model recommending crops based on soil and climate data with 94% prediction accuracy.
- Built and deployed a web interface with Flask backend and basic frontend for real-time recommendations.
- Applied classification models (Random Forest, Decision Tree) and optimized with feature engineering.

ACHIEVEMENTS

- Selected from 80,000+ applicants for an elite graph algorithms camp by Codeforces Master; solved expert-level problems and featured in the Hall of Fame. Learnt more about problem solving using data structures and algorithms and design and analysis of algorithms.
- Certifications: MATLAB, Fundamentals of AI/ML, Programming in Java, Machine Learning

ADDITIONAL INFORMATION

- Languages Spoken: English, Malayalam, Hindi
- Hobbies: Drawing/Painting (Acrylic, water colour, pencil shading), Dance(Bharatnatyam, Mohiniyattam , Kuchipudi)
